Secude HaloCORE

Secure SAP data exports. Prevent data leakage. Simplify compliance.

Are your SAP data exports secure if they fall into the wrong hands? With each employee, partner and device representing a potential security gap, you risk costly and time-consuming data breaches without automatic file security.

HaloCORE® automatically monitors and secures all data exported from SAP, preventing data leakage and simplifying compliance.

Direct SAP Integration	SAP Data Access Control	Detailed SAP Data Tracking
HaloCORE embeds Microsoft Purview Information Protection (MPIP) into SAP's application layer, protecting your data from inception.	HaloCORE automatically blocks unauthorized SAP downloads and controls access to SAP data exports outside your IT perimeter.	HaloCORE tracks SAP data exports, monitoring data transfers, logging access history and storing the info required for compliance.

With HaloCORE:

- **Embed Zero Trust protection by default.** HaloCORE automatically protects your internal and external SAP data from unauthorized access, so you can extract and share business-critical data with peace of mind.

- **End damage from data breaches.** HaloCORE's lifelong file access control protects your sensitive SAP information even if leaked or stolen, preventing costly and time-consuming data beaches (the average costs $4.45 million), and avoiding reputational damage.

- **Be compliant, avoid fines.** HaloCORE monitors access to extracted SAP data and logs critical access data so you can easily prove compliance to regulators (i.e. for ISO 27001) and avoid GDPR violations (with fines up to €20 million).

"Our exposure would be huge without HaloCORE," Infosys

About Secude

Secude, a Microsoft and SAP Partner, is a global leader for Zero Trust data protection and data governance.

Secude has been protecting the data of Fortune 500 and DAX-listed companies for over 25 years. Our Microsoft Purview Information Protection (MPIP) extension embeds Zero Trust protection and data governance into our customers sensitive files from creation, preventing data leakage, reputational damage and non-compliance. With branches in Europe, North America and Asia, Secude supports customers with the implementation of IT security strategies through a global network.
